(64) **Carbohydrate lactam derivatives and their use in cosmetic compositions.**

(57) A composition suitable for topical application to mammalian skin or hair for inducing, maintaining or increasing hair growth comprises:

(i) a chemical inhibitor of glycosidase activity chosen from lactams having the structure:

where A¹ and A⁶ are -H, -CH₃.

A¹ and A⁶ being the same or different, and at least one of which being the group:

in a lactam ring;

and where Q is -OT', -NHT' or a lactam linkage to A¹ or A⁶; the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

-H, -C_pH_{2p+1} or a metal ion,

T' is -H or -COC_pH_{2p+1}, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

-OT' or -NHT',

then that group or groups can be of either stereochemical configuration with respect to the plane of the ring; and

(ii) a cosmetically acceptable vehicle for the chemical inhibitor. Certain novel lactams are also claimed.

Description

LACTAMS, THEIR SYNTHESIS AND USE IN COSMETIC COMPOSITIONS

FIELD OF THE INVENTION

5 The invention relates to novel lactams, particularly those having from 3 to 5 carbon atoms in the lactam ring, and to their synthesis. The invention also relates to the use of the novel lactams, and to certain known lactams in cosmetic or pharmaceutical compositions intended for topical application to skin or hair in order to promote hair growth.

10 PRIOR ART

D-glucaro-1,5-lactam is identified by Meiji Seika Kaisha Ltd in GB 1 577 868 and certain alkyl esters thereof in GB 1 440 670 by the same patentee.

DEFINITION OF THE INVENTION: COMPOUND PER SE

15 The novel lactams of the invention have the structure:

where A¹ and A⁶ are -H, -CH₃,

OT
 $\begin{array}{c} \text{O} \\ \text{||} \\ \text{-C=O, -CH}_2\text{OT} \\ | \\ \text{-NH} \end{array}$

or $\begin{array}{c} \text{O} \\ \text{||} \\ \text{-C=O,} \\ | \\ \text{-NH} \end{array}$

A¹ and A⁶ being the same or different, and at least one of which being the group:

$\begin{array}{c} \text{O} \\ \text{||} \\ \text{-NH} \\ | \\ \text{-C=O} \end{array}$

45 in a lactam ring;

and where Q is -OT', -NHT' or a lactam linkage to A¹ or A⁶;

the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

-H, -C_pH_{2p+1} or a metal ion,

50 T' is -H or -COC_pH_{2p+1}, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

-OT' or -NHCOT',

55 then that group or groups can be of either stereochemical configuration with respect to the plane of the ring.

provided also that where the lactam has the structure:

60

and when A⁶ is

$\begin{array}{c} \text{OT} \\ | \\ -\text{C}=\text{O} \end{array}$ and T is $-\text{C}_p\text{H}_{2p+1}$, then p is an integer of from 5 to 22.

Particular examples of novel lactams according to the invention include the following:
L-Galactono-1,4-lactam, having the structure (3)

L-Arabin-1,5-lactam, having this structure (4)

D-Fucono-1,5-lactam, having the structure (5)

D-Glucaro-1,4-lactam, having the structure (6):

D-Glucurono-6,3-lactam, having the structure (7):

1,2,5-tri-O-acetyl-D-glucurono-6,3-lactam having the structure (8):

2-Acetamido-2-deoxyglucono-1,5-lactam, having the structure (9):

2-Acetamido-2-deoxygalactono-1,5-lactam, having the structure (10):

(10)

D-Glucono-1,4:6,3-dilactam, having the structure (11):

(11)

L-Idaro-1,5-lactam, as having the structure (12):

(12)

Particular examples of esterified forms of aldarolactams include the following:
2,3,5-Tri-O-acetyl-D-glucono-1,4-lactam, having the structure (13):

(13)

2,5-Di-O-acetyl-D-Glucono-1,4:6,3-dilactam, having the structure (14):

(14)

15 L-Idaro-1,5-lactam methyl ester, having the structure (15):

(15)

2-Propionoamide-2-deoxyglucaro-1,5-lactam, having the structure (16):

(16)

SYNTHESIS OF THE NOVEL LACTAMS

Certain of the novel 1,5 lactams according to the invention (eg. structure 18 below) can be prepared from an esterified deoxyamino uronic acid (for example, structure 17), by treatment with a base:-

(17)

(18)

Another method suitable for the synthesis of 1,5 lactams according to the invention involves catalytic reduction of a 5-azido-1,4-lactone (19):-

where Y and Z' are suitable protecting groups, for example trityl or benzyl. In the special case where C-6 is COOR (where R is alkyl), then the above route yields aldarolactone (see pathway for structure (12)).

Aldarolactams (20) may also be prepared from the corresponding aldonolactams (18) by catalytic oxidation reactions.

(18)

(20)

Synthesis of L-idaro-1,5-lactam (structure 12)

By way of example, the synthesis of a novel lactam according to the invention will now be described.

The synthesis of L-idaro-1,5-lactam (12) involves a multi-stage synthesis starting from 1,2:5,6-di-D-glucofuranose (A). All reactions were followed by thin layer chromatography and structural confirmation of the intermediates was performed using proton and C-13 NMR, IR and in some cases optical rotation values.

3-O-Benzyl 1,2:5,6-di-O-isopropylidene- α -D-glucofuranose (B) was prepared by the reaction of (A) with benzyl bromide and sodium hydride in N,N-dimethyl-formamide (DMF) as described by Brimacombe et al., [Carbohydr. Res. 8, 82-88 (1968)].

(B) was obtained as an oil in 95% yield ($[\alpha]_D^{25}$ -26.2° in ethanol).

Selective deprotection of the 5,6-isopropylidene group to give (C) was achieved by dissolving crude (B) in 75% aqueous acetic acid and stirring overnight at room temperature, also as described by Brimacombe et al. This gave (C) as an oil (95%, $[\alpha]_D^{25}$ -48.4°, C 2.50 (CHCl₃)).

5 Tritylation of the primary hydroxyl group at position 6 was done by reacting (C) with triphenyl methyl chloride in dried pyridine as described by Gramera et al [J. Org. Chem. 28 (63) 1401]. This gave (D) as an oil which was purified by flash chromatography (petroleum ether (40/60): ethyl acetate 10:1 v/v) (95%, $[\alpha]_D^{25}$ -36.0°, C 2.97 (CHCl₃)).

10 The 5-O-acetate (E) was prepared according to Whistler and Lake [Methods in Carbohydr. Chem., 6, 286-291 (1972)] by reacting (D) with acetic anhydride and dry pyridine at 0°C. (E) was obtained as a syrup (80%). Preparation of (F) was achieved in three steps as described by Jacquinet et al. [Carbohydr. Res. 130, 221-241 (1984)]. (F) was obtained as an amorphous solid (45%).

15 The 5-triflate (G) was prepared by reacting (F) with trifluoromethane sulphonic anhydride under anhydrous conditions. This was followed by reacting the crude triflate (G) with sodium azide in DMF at ~50°C to give the inverted 5-azido-β-L-idofuranuronate (H). (H) was subsequently hydrolysed (50% trifluoroacetic acid (aq.)) to give the diol (I). Selective oxidation at the anomeric hydroxyl was carried out using bromine in aqueous media. This reaction generated the 5-azido-idaro lactone (J). Under conditions of catalytic hydrogenation in the presence of 5-10% Pd/C, (J) gave the methyl ester of L-idaro-1,5-lactam (15), which was subjected to base hydrolysis to give the desired compound (12).

USE OF NOVEL LACTAMS AND CERTAIN RELATED KNOWN LACTAMS IN COSMETIC OR PHARMACEUTICAL COMPOSITIONS INTENDED FOR TOPICAL APPLICATION TO SKIN OR HAIR

FIELD OF THE INVENTION

The invention also relates to cosmetic and pharmaceutical compositions for topical application to mammalian skin or hair, containing certain lactams as enzyme inhibitors which are capable of promoting hair growth, especially terminal hair growth on the human scalp.

BACKGROUND

The Hair Growth Cycle

It should be explained that in most mammals, hair does not grow continuously, but undergoes a cycle of activity involving alternate periods of growth and rest. The hair growth cycle can be divided into three main stages, namely:

- (i) the growth phase known as anagen, during which the hair follicle penetrates deep into the dermis with the cells of the bulb dividing rapidly and differentiating to form the hair,
- (ii) the transitional stage known as catagen, which is heralded by the cessation of mitosis, and during which the follicle regresses upwards through the dermis and hair growth ceases,
- (iii) the resting stage known as telogen, in which the regressed follicle contains a small secondary germ with an underlying ball of tightly packed dermal papilla cells.

The initiation of a new anagen phase is revealed by rapid proliferation in the germ, expansion of the dermal

papilla and elaboration of basement membrane components. The hair cycle is then repeated many times until, as a consequence of the onset of male pattern baldness, most of the hair follicles spend an increasing proportion of their time in the telogen stage, and the hairs produced become finer, shorter, and less visible; this is known as terminal to vellus transformation.

PRIOR ART

Alleged Baldness Cures

Although there have been many claims in the scientific literature to the promotion or maintenance of hair growth by the topical application of hair tonics and the like, with the possible exception of minoxidil, none has been shown to be sufficiently free from disadvantageous clinical side effects, whether administered topically, orally or systemically, to warrant commercial exploitation as an ethical pharmaceutical, proprietary medicine, or as a cosmetic product. Possibly, the only means which has met with partial success for growing hair on the bald or balding human head is by transplantation of hair to the bald areas. This is, however, an extremely painful operation and is not always successful. Furthermore, it is immediately apparent to the casual observer that the subject has received a hair transplant and it may take many months or even years before hair regrowth, following this operation, assumes an appearance which resembles that of the original naturally growing hair.

Among the many hair regrowth studies that have been reported in the literature, there is included the work of Bazzano as described in PCT International Publication No. WO 85/04577. This publication describes a composition which is useful for increasing the rates of hair growth on mammalian skin, prolonging the anagen phase of the hair growth cycle and for treating various types of alopecias. The composition in question comprises a pyrimidine carbamate.

It has also been reported in US patent no. 4 139 619 to Chidsey assigned to the Upjohn Company, that a topical composition comprising minoxidil as the free base or acid addition salt thereof, or certain specified related iminopyrimidines, is useful in stimulating the conversion of vellus hair to growth as terminal hair, as well as increasing the rate of growth of terminal hair.

In spite of the apparent stimulation of hair growth or regrowth reported independently by Bazzano and Chidsey, following topical application of minoxidil or related compounds, there is general concern that systemic side-effects can result, particularly following topical application of minoxidil. Thus it is generally recognised in the medical literature that the side effects of orally administered minoxidil are very serious, and include fluid retention, tachycardia, dyspnea, gynecomastia, fatigue, nausea and cardiotoxicity.

In addition to the alleged benefits of employing the pyrimidine carbamates of Bazzano or minoxidil of Upjohn, many other hair regrowth studies have been reported in the literature. In particular, the work of Meyer et al (1961) in the Proceedings of the Society of Experimental and Biological Medicine, 108, 59-61, is worthy of mention. Meyer and his co-workers repeatedly injected acid mucopolysaccharides into the skin of shaved rabbits and reported observing the initiation of the hair growth cycle with stimulation of hair growth which in some instances appeared to be thicker than usual. They found that heparan sulphate was particularly active, while dermatan sulphate and chondroitin-6-sulphate were also active in this respect, but to a lesser extent.

It has also been reported by Frajdenrajch in EP-A-O 035 919 to include chondroitin sulphate in a hair composition in order to prevent loss and encourage growth of the hair.

Also, Shansho Seigaku in JA-59/186911 describes a shampoo containing a mucopolysaccharide such as chondroitin sulphate.

There are also other references, mainly of Japanese origin, which claim the use of chondroitin sulphate in preparations for topical application to human skin, particularly as hair tonics.

Kohler in DE OLS 24 38 534 reports that D-glucuronic acid and glucuronic acid- γ -lactone (also known as glucurono-6,3-lactone) can be applied externally to the skin, together with vitamin C and water, ethanol or aqueous ethanol as a vehicle, as a scalp care agent. In a particular experiment, Kohler reports regrowth of hair following daily application for six months of a 1% solution of D-glucuronic acid.

Kohler et al in DE OLS 26 19 100 also claims the use of glucuronic acid or glucuronic acid- γ -lactone as inhibitors in agents for inhibiting the activity of β -glucuronidase, particularly in combination with vitamin B₁₂. Whereas Kohler et al are concerned with β -glucuronidase as found in unusually high concentrations in healing wounds and cancer tissues, they do state that the agents also have a beneficial effect on the loss of hair.

Background to the Invention

The above review of the most relevant references concerning the alleged promotion of hair growth following topical or systemic application of specified molecules, has prompted the study in greater detail, of the biological and biochemical mechanisms involved in the control of the hair growth cycle. The reported role of the dermal papilla which is situated at the base of the hair follicle, and the closely related cells of the connective tissue sheath which surrounds the hair follicle are alleged to be of key importance in governing the cyclic behaviour of hair follicles. This has been shown, for example, directly by Oliver R F (1970) J. Embryol Exp Morphol., 23, 219-236, and the changes in the dermal papilla during the hair cycle are consistent with these observations. At the end of anagen, there is a sudden loss of fibronectin [Couchman J R and Gibson W T, (1985) Dev Biol., 108, 290-298] and metachromatic (glycosaminoglycan) staining [Montagna W et al, (1952) Q J Microsc Sci., 93, 241-245] from the connective tissue matrix of the dermal papilla which then undergoes

condensation.

Conversely, expansion and elaboration of new matrix is associated with the onset of anagen. A direct role of matrix components in stimulating hair growth was suggested by the work of Meyer et al (1961), [supra].

It is accordingly apparent that glycosaminoglycan breakdown is an important early change in catagen, and since there is already evidence for a link between the presence of intact glycosaminoglycans and hair growth, we have suggested that prevention of glycosaminoglycan breakdown may lead to earlier onset and/or prolongation of anagen. This would effectively retard hair loss and reverse baldness.

One of the more important classes of enzymes that are implicated in the breakdown of glycosaminoglycans are glycosidases. It follows that glycosaminoglycan breakdown may be prevented, *inter alia*, by inhibiting glycosidase activity.

We have now identified certain lactams as chemical inhibitors of key glycosidases, involved in the breakdown of glycosaminoglycan chains.

It should be explained by "chemical inhibitor" is meant a substance that is physiologically suitable and safe for topical application to human skin, and which is capable of inhibiting glycosidase activity.

One of the preferred lactams, namely D-glucaro-1,5 -lactam, when employed together with an aminoglycosidic antibiotic such as Kanamycin, is claimed by Melji Seika Kaisha Ltd in GB 1 577 868 as being useful in protecting against renal failure or insufficiency by oral or parental administration. The same patentee in GB 1 440 670 also discloses the alkyl ester of this lactam and its use when administered orally in the treatment of bladder tumours with associated β -glucuronidase activity.

We have surprisingly found that these lactams, when applied topically to skin will stimulate hair growth in view of their ability to inhibit glycosidase activity, as predicted on the basis of the theory outlined above.

DEFINITION OF THE INVENTION

Accordingly, the invention provides a composition suitable for topical application to mammalian skin or hair for inducing, maintaining or increasing hair growth which comprises:

(i) a chemical inhibitor of glycosidase activity chosen from lactams having the structure:

(1)

where A¹ and A⁶ are -H, -CH₃,

$\begin{array}{c} \text{OT} \\ | \\ -\text{C}=\text{O} \end{array}$, $-\text{CH}_2\text{OT}$

or $\begin{array}{c} -\text{NH} \\ | \\ -\text{C}=\text{O} \end{array}$

A¹ and A⁶ being the same or different, and at least one of which being the group:

$\begin{array}{c} -\text{NH} \\ | \\ -\text{C}=\text{O} \end{array}$

in a lactam ring;

and where Q is -OT', -NHT' or a lactam linkage to A¹ or A⁶;

the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

-H, -C_pH_{2p+1} or a metal ion,

T' is -H or -COC_pH_{2p+1}, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

-OT' or -NHT',

then that group or groups can be of either stereochemical configuration with respect to the plane of the ring; and

(ii) a cosmetically acceptable vehicle for the chemical inhibitor; the total amount of chemical inhibitor present in the composition being sufficient to increase hair growth in the rat, when said composition is applied topically thereto over a period of no more than 3 months, by at least 10% more than that obtainable using a control composition from which the said inhibitors have been omitted; in accordance with the Rat Hair Growth Test.

DISCLOSURE OF THE INVENTION

THE CHEMICAL INHIBITOR OF GLYCOSIDASE ACTIVITY

As has already been stated, a "chemical inhibitor" is a substance which is not only physiologically suitable and safe for topical application to skin, but which is capable of inhibiting glycosidase activity.

The chemical inhibitor of glycosidase activity is chosen from lactams having the structure:

where A^1 and A^6 are $-\text{H}$, $-\text{CH}_3$,

OT
 $-\text{C}=\text{O}$, $-\text{CH}_2\text{OT}$
 $-\text{NH}$

or $-\text{C}=\text{O}$,

A^1 and A^6 being the same or different, and at least one of which being the group:

$-\text{NH}$
 $-\text{C}=\text{O}$

in a lactam ring;

and where Q is $-\text{OT}'$, $-\text{NHT}'$ or a lactam linkage to A^1 or A^6 ;

the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

$-\text{H}$, $-\text{C}_p\text{H}_{2p+1}$ or a metal ion,

T' is $-\text{H}$ or $-\text{COC}_p\text{H}_{2p+1}$, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

$-\text{OT}'$ or $-\text{NHT}'$,

then that group or groups can be of either stereochemical configuration with respect to the plane of the ring.

A particular preferred example of the lactams derived from the above generic structure (1) is D-glucaro-1,5-lactam, an inhibitor of β -glucuronidase activity, having the structure (2)

(2)

Further examples of lactams include the following:

L-Galactono-1,4-lactam, an inhibitor of β -galactosidase and β -N-acetylhexosaminidase activity, having the structure (3);

L-Arabin-1,5-lactam, an inhibitor of β -galactosidase activity, having this structure (4);

D-Fucono-1,5-lactam, an inhibitor of β -galactosidase activity, having the structure (5);

D-Glucaro-1,4-lactam, an inhibitor of β -glucuronidase and α -L-iduronidase activity, having the structure (6);

D-Glucurono-6,3-lactam, an inhibitor of β -glucuronidase activity, having the structure (7);

1,2,5-tri-O-acetyl-D-glucurono-6,3-lactam an inhibitor of β -glucuronidase and α -L-iduronidase activity having the structure (8);

2-Acetamido-2-deoxyglucano-1,5-lactam, an inhibitor of β -N-acetylhexosaminidase, having the structure (9);

2-Acetamido-2-deoxygalactono-1,5-lactam, an inhibitor of β -N-acetylhexosaminidase, having the structure (10);

D-Glucaro-1,4:6,3-dilactam, an inhibitor of β -glucuronidase and α -L-iduronidase activity, having the structure (11);

L-Idaro-1,5-lactam, and inhibitor of α -L-iduronidase activity, having the structure (12);

Preferred examples of esterified forms of aldonolactams which give a more sustained inhibitory effect are: 2,3,5-Tri-O-acetyl-D-glucaro-1,4-lactam, an inhibitor of β -glucuronidase and α -L-iduronidase activity, having the structure (13);

2,5-Di-O-acetyl-D-Glucaro-1,4:6,3-dilactam, an inhibitor of β -glucuronidase and α -L-iduronidase activity, having the structure (14);

D-Glucaro-1,5-lactam methyl ester, an inhibitor of β -glucuronidase activity, having the structure (15); and

2-Propionoamido-2-deoxyglucaro-1,5-lactam, an inhibitor of β -glucuronidase activity, having the structure (16).

Mixtures comprising two or more of the chemical inhibitors can be employed in the composition according to the invention.

The total amount of chemical inhibitor present in the composition according to the invention is sufficient to increase hair growth in the rat, the model selected for this test, when said composition is applied topically thereto by at least 10% more than that obtainable using a control composition from which the said inhibitor has been omitted.

Preferably, the amount of chemical inhibitor should be sufficient to increase hair growth in the rat by at least 20%, more preferably by at least 30%, most preferably by at least 40% and ideally by at least 50%.

The sufficient amount will depend on the effectiveness of a chemical inhibitor, some being more effective than others, but in general, an amount of from 0.0001 to 99%, preferably from 0.1 to 20% by weight of the composition will provide an adequate dose to the skin after topical application.

The Vehicle

The composition according to the invention also comprises a solid, semi-solid or liquid cosmetically and/or physiologically acceptable vehicle, to enable the chemical inhibitor to be conveyed to the skin at an appropriate dilution. The nature of the vehicle will depend upon the method chosen for topical administration of the composition. The vehicle can itself be inert or it can possess physiological or pharmaceutical benefits of its own.

It should be explained that vehicles are substances which can act as diluents, dispersants, or solvents for the chemical inhibitor which therefore ensure that it can be applied to and distributed evenly over the hair and/or scalp at an appropriate concentration. The vehicle is preferably one which can aid penetration of the inhibitors into the skin to reach the immediate environment of the hair follicle. Compositions according to this invention can include water as a vehicle, and/or at least one cosmetically acceptable vehicle other than water.

Vehicles other than water that can be used in compositions according to the invention can include liquids or solids as emollients, solvents, humectants, thickeners and powders. Examples of each of these types of vehicles, which can be used singly or as mixtures of one or more vehicles, are as follows:

Emollients, such as stearyl alcohol, glyceryl monoricinoleate, glyceryl monostearate, propane-1,2-diol, butane-1,3-diol, mink oil, cetyl alcohol, isopropyl isostearate, stearic acid, isobutyl palmitate, isocetyl stearate, oleyl alcohol, isopropyl laurate, hexyl laurate, decyl oleate, octadecan-2-ol, isocetyl alcohol, eicosanyl alcohol, behenyl alcohol, cetyl palmitate, dimethylpolysiloxane, di-n-butyl sebacate, isopropyl myristate, isopropyl palmitate, isopropyl stearate, butyl stearate, polyethylene glycol, triethylene glycol, lanolin, sesame oil, coconut

oil, arachis oil, castor oil, acetylated lanolin alcohols, petroleum, mineral oil, butyl myristate, isostearic acid, palmitic acid, isopropyl linoleate, lauryl lactate, myristyl lactate, decyl oleate, myristyl myristate;

Propellants, such as trichlorofluoromethane, dichlorodifluoromethane, dichlorotetrafluoroethane, monochlorodifluoromethane, trichlorotrifluoroethane, propane, butane, isobutane, dimethyl ether, carbon dioxide, nitrous oxide;

Solvents, such as ethyl alcohol, methylene chloride, isopropanol, acetone, castor oil, ethylene glycol monoethyl ether, diethylene glycol monobutyl ether, diethylene glycol monoethyl ether, dimethyl sulphoxide, dimethyl formamide, tetrahydrofuran;

Humectants, such as glycerin, sorbitol, sodium 2-pyrrolidone-5-carboxylate, soluble collagen, dibutyl phthalate, gelatin;

Powders, such as chalk, talc, fullers earth, kaolin, starch, gums, colloidal silicon dioxide, sodium polyacrylate, tetra alkyl and/or trialkyl aryl ammonium smectites, chemically modified magnesium aluminium silicate, organically modified montmorillonite clay, hydrated aluminium silicate, fumed silica, carboxyvinyl polymer, sodium carboxymethyl cellulose, ethylene glycol monostearate.

Activity Enhancer

The composition according to the invention also preferably comprises a means for enhancing the activity of the chemical inhibitor, as herein defined, to aid its penetration into and/or through the skin, or otherwise to enhance its benefits in increasing hair growth.

The activity enhancer can be chosen from a wide variety of molecules, in addition to some of the vehicles as hereinbefore described, which can function in different ways to enhance the hair growth effects of the chemical inhibitor. Particular classes of activity enhancers include other hair growth stimulants, penetration enhancers and cationic polymers, whose presence can further improve the delivery of the chemical inhibitor through the stratum corneum to its site of action in the immediate environment of the hair follicle.

Some activity enhancers can also function as vehicles for the chemical inhibitor.

The means for enhancing the activity of the chemical inhibitor can also take the form of an iontophoretic device as will be explained later. This and other means for enhancing the activity of said chemical inhibitors are now disclosed in greater detail.

(a) Other Hair Growth Stimulants

Examples of other substances which themselves possess the ability to stimulate or increase hair growth include, for example;

Benzalkonium chloride

Benzethonium chloride

Phenol

Estradiol

Diphenhydramine hydrochloride

Chlorpheniramine maleate

Chlorophyllin derivatives

Cholesterol

Salicylic acid

Cystine

Red pepper tincture

Benzyl nicotinate

dl-Menthol

Peppermint oil

Calcium pantothenate

Panthenol

Castor oil

Hinokitiol

Prednisolone

Resorcinol

Further substances which themselves possess the ability to increase the rate of terminal hair growth include:

(i) α -1,4 esterified disaccharides described by Choay S.A. in EP-A-O 064 012, having the structure (50):

where

Z represents a functional nitrogen group, such as an azide or a group having the structure -NHB, in which B represents -H or a functional group such as acetyl or sulphate as a salt with an organic or mineral cation; M represents -H or SO_3M_1 , where M_1 is an organic or metallic cation, particularly an alkali metal; or an acetyl group;

R represents a C_1 to C_4 alkyl radical, especially methyl; or an aryl radical;

A represents a functional group such as an acid or $-\text{COOR}_1$, where R_1 represents -H or a C_1 to C_4 alkyl radical, especially methyl; or a metal, especially an alkali metal;

(ii) esterified oligosaccharides as described by Unilever in EP-A-O 211 610, including at least one esterified disaccharide unit consisting of a uronic acid residue having the structure (51):

and a hexosamine residue having the structure (52):

where

R' is -H, C_3 to C_{10} alkyl or

R'' is -H, C_1 to C_4 alkyl, $-\text{CO}(\text{CH}_2)_m\text{CH}_3$, $-\text{SO}_3\text{M}'$,

R''' is -H, $-\text{CO}(\text{CH}_2)_m\text{CH}_3$, or $-\text{SO}_3\text{M}$

M' is -H, or a metallic or organic cation

n is 0 or an integer of from 1 to 7, and

m is 0 or the integer 1 or 2;

the groups designated R'' being the same or different, one R'' group from each pyranose ring structure being linked by a glycosidic linkage having the configuration α -1,3, α -1,4, β -1,3 or β -1,4; and the $-\text{COOR}'$, $-\text{CH}_2\text{OR}''$ and $-\text{OR}''$ groups being of either configuration with respect to the pyranose rings;

(iii) Minoxidil and its derivatives, as described by The Upjohn Co in GB 1 167 735,

(iv) Minoxidil glucuronides, as described by Unilever in EP-0 242 967,

(v) Minoxidil sulphates, as described by The Upjohn Co. in WO 86/04231.

(vi) Direct proteoglycanase inhibitors, such as 1,10-phenanthroline.

(vii) Glycosaminoglycanase inhibitors, such as aldonolactones and esterified aldonolactones having the structure (53):

(53)

where

A¹ and A⁶ are -H, -CH₃,

OD'

OD

-C = O or -C = O

B is OD'' or a lactone linkage to position 1 or 6, or -NHCOCH₃

and where

D is -H or C₂ to C₈ alkyl,

D' is the remainder of the molecule joined through another C atom at positions 2 to 5 to form a lactone,

D'' is -H or C₂ (ie acetyl) to C₄ acyl of either configuration with respect to the backbone of this molecule;

preferred examples of which include:

L-Galactono-1,4-lactone

L-Arabeto-1,5-lactone

D-Fucono-1,5-lactone

D-Glucono-1,4-lactone

D-Glucurono-6,3-lactone

Galactaric acid lactone

2-Acetamido-2-deoxygluconolactone

2-Acetamido-2-deoxygalactono-lactone

D-Glucono-1,4:6,3-dilactone

L-Idaro-1,4-lactone

2,3,5-Tri-O-acetyl-D-glucono-1,4-lactone

2,5-Di-O-acetyl-D-glucono-1,4:6,3-dilactone

(viii) Glycosaminoglycanase inhibitors, such as monosaccharides and esterified monosaccharides having the structure (54):

(54)

where A is -OG or -NHCOCH₃

G is -H, -SO₃M'', C₂ (ie acetyl) to C₄ acyl

G' is -H or -OG

M'' is -H or a metal cation

5 wherein the functional groups can be in either configuration with respect to the backbone of the above molecule;

preferred examples of which include:

N-Acetylglucosamine

N-Acetylgalactosamine

10 D-Galactosamine

D-Glucosamine-3-sulphate

N-Acetylmannosamine

(ix) glycosaminoglycan chain cellular uptake inhibitors such as, hexuronic acid and esters thereof which may be represented by the generic structure (55):

where

G is -H, -SO₃M'', C₂ (ie acetyl) to C₄ acyl;

D is -H or C₂ to C₈ alkyl

M'' is -H or a metal cation

40 wherein the functional groups can be in either configuration with respect to the backbone of the above molecule;

(x) chemical activators of protein kinase C enzymes chosen from diacylglycerols having the structure (56):

where X is the same or different, and is represented by the grouping:

where x is 0, or an integer of from 1 to 28, and

y is 0, or an integer of from 1 to 5;

the X groups being of either stereochemical configuration with respect to the carbon backbone of the glycerol molecule, and the double bonds being of either cis or trans configuration;

60 preferred examples of which include:

1,2-Dibutanoyl-rac-glycerol

1,2-Dihexanoyl-sn-glycerol

1,2-Dioctanoyl-rac-glycerol

1,2-Dioctanoyl-sn-glycerol

65 1,2-Didecanoyl-rac-glycerol

1-Oleoyl-2-acetyl-rac-glycerol	
1-Oleoyl-2-acetyl-sn-glycerol	
1-Stearoyl-2-arachidonoyl-sn-glycerol	
1,2-Distearoyl-rac-glycerol	
1,2-Dipentadecanoyl-sn-glycerol	5
1,2-dipentadecanoyl-rac-glycerol	
1,2-Dipalmitoyl-rac-glycerol	
1,2-Dipalmitoyl-sn-glycerol	
1,2-Diseptadecanoyl-rac-glycerol	
1,2-Dioleoyl-sn-glycerol	10
1,2-Dioleoyl-rac-glycerol	
1,2-Diarachidonoyl-sn-glycerol	
1,2-Dieicosanoyl-sn-glycerol	
1,2-Didoeicosanoyl-rac-glycerol, and	
1,2-Dioctaelicosanoyl-sn-glycerol.	15

(b) Penetration Enhancers

As has been stated earlier, the presence of a penetration enhancer can potentiate the benefit of the chemical inhibitor, by improving its delivery through the stratum corneum to its site of action in the immediate environment of the hair follicle close to the dermal papilla.

The penetration enhancer can accordingly function in a variety of ways. It can for example, improve the distribution of the chemical inhibitor on the skin surface or, It can increase its partition into the skin from the composition when applied topically, so aiding its passage to its site of action. Other mechanisms enhancing the benefit of the chemical inhibitor may also be involved.

Examples of penetration enhancers include:

2-methyl propan-2-ol	25
Propan-2-ol	
Ethyl-2-hydroxypropanoate	
Hexan-2,5-diol	
POE(2) ethyl ether	30
DI(2-hydroxypropyl) ether	
Pentan-2,4-diol	
Acetone	
POE(2) methyl ether	
2-hydroxypropionic acid	35
2-hydroxyoctanoic acid	
Propan-1-ol	
1,4 Dioxane	
Tetrahydrofuran	
Butan-1,4-diol	40
Propylene glycol dipelargonate	
Polyoxypropylene 15 stearyl ether	
Octyl alcohol	
POE ester of oleyl alcohol	
Oleyl alcohol	45
Lauryl alcohol	
Diethyl adipate	
Dicapryl adipate	
Diisopropyl adipate	
Diisopropyl sebacate	50
Dibutyl sebacate	
Diethyl sebacate	
Dimethyl sebacate	
Diethyl sebacate	
Dibutyl suberate	55
Diethyl azelate	
Debenzyl sebacate	
Dibutyl phthalate	
Dibutyl azelate	
Ethyl myristate	60
Dimethyl azelate	
Butyl myristate	
Dibutyl succinate	
Didecyl phthalate	
Decyl oleate	65

Ethyl caproate
 Ethyl salicylate
 Isopropyl palmitate
 Ethyl laurate
 5 2-ethyl-hexyl pelargonate
 Isopropyl isostearate
 Butyl laurate
 Benzyl benzoate
 Butyl benzoate
 10 Hexyl laurate
 Ethyl caprate
 Ethyl caprylate
 Butyl stearate
 Benzyl salicylate
 15 2-hydroxypropanoic acid
 2-hydroxyoctanoic acid,

Yet further penetration enhancers include esters of pyroglutamic acid having the structure (57):-

(57)

where Z is C₁ to C₃₀ alkyl, or

and where Z' and Z'' are the same or different and are each represented by H or the grouping (58):
 [(CH₃)_u, (CH₂OH)_v, (CH₂)_w, (CH₃CH₂)_s, (CH=CH)_z]- (58)

where

u is zero or 1

v is zero, or the integer 1 or 2,

w is zero, or an integer of from 1 to 21

s is zero, or an integer of from 1 to 4,

40 y is zero, or the integer 1 or 2,

z is zero, or an integer of from 1 to 22, and

u + v + w + x + y + z is an integer of from 1 to 22;

provided that when the subgrouping (CH=CH) is present, then the total number of carbon atoms in said grouping is from 10 to 22.

45 Examples of suitable esters of pyroglutamic acid where Z in structure (57) is C₁ to C₃₀ alkyl are:

pyroglutamic acid methyl ester

pyroglutamic acid ethyl ester

pyroglutamic acid n-propyl ester

pyroglutamic acid n-butyl ester

50 pyroglutamic acid n-heptyl ester

pyroglutamic acid n-octyl ester

pyroglutamic acid n-nonyl ester

pyroglutamic acid n-decyl ester

pyroglutamic acid n-undecyl ester

55 pyroglutamic acid n-dodecyl ester

pyroglutamic acid n-tridecyl ester

pyroglutamic acid n-tetradecyl ester

pyroglutamic acid n-hexadecyl ester

pyroglutamic acid n-octadecyl ester

60 pyroglutamic acid n-eicosyl ester

pyroglutamic acid iso-propyl ester

pyroglutamic acid 2-methylhexyl ester

pyroglutamic acid 2-ethylhexyl ester

pyroglutamic acid 3,7-dimethyloctyl ester

65 pyroglutamic acid 2-hexyldecyl ester

pyroglutamic acid 2-octyldodecyl ester
 pyroglutamic acid 2,4,4-trimethyl-1-pentane ester
 pyroglutamic acid methyloctyl ester

Particularly preferred esters of this group are those where Z in structure (1) is C₁ to C₁₄ alkyl, (linear or branched), especially C₁ to C₆ (linear or branched).

Further examples of preferred esters of pyroglutamic acid, where Z in structure (57) is

are those where Z' and/or Z'' having the structure shown for grouping (58), include straight and branched chain, saturated or unsaturated aliphatic groups having from 1 to 22 carbon atoms, such as the alkyl groups:

methyl

ethyl

propyl

iso-propyl

butyl

iso-butyl

n-valeryl

iso-valeryl

n-caproyl

n-heptyl

n-caprylyl

n-capryl

lauryl

myristyl

palmityl

stearyl, and

arachidyl,

and the C₁₀₋₂₂ alkenyl groups:

linoleyl

linolenyl

γ-linolenyl

arachidonyl, and

columbinyl.

Further examples of the grouping (58) also include hydroxyalkyl groups having from 1 to 22 carbon atoms, such as:

hydroxymethyl

2-hydroxyethyl

2-hydroxy-n-propyl

3-hydroxy-n-propyl

2-hydroxy-n-butyl

3-hydroxy-n-butyl

4-hydroxy-n-butyl

5-hydroxy-n-valeryl

6-hydroxy-n-caproyl

2,3-dihydroxy-n-propyl

2,3-dihydroxy-n-butyl

12-hydroxystearyl.

It is to be understood that the above list is not exhaustive, there being many other examples of alkyl or substituted alkyl groups expressed by the above generic grouping (58).

Further specific examples of esters of pyroglutamic acid which are particularly suited to use as penetration enhancers are:

2-[pyroglutamoyloxy]-propionic acid

methyl-2-[pyroglutamoyloxy]-acetate

ethyl-2-[pyroglutamoyloxy]-n-propionate

ethyl-2-[pyroglutamoyloxy]-n-butyrate

ethyl-2-[pyroglutamoyloxy]-iso-butyrate

ethyl-2-[pyroglutamoyloxy]-n-valerate

ethyl-2-[pyroglutamoyloxy]-n-caproate

ethyl-2-[pyroglutamoyloxy]-n-heptylate

ethyl-2-[pyroglutamoyloxy]-n-caprylate

ethyl-2-[pyroglutamoyloxy]-n-pelargonate

ethyl-2-[pyroglutamoyloxy]-3-hydroxybutyrate

iso-propyl-2-[pyroglutamoyloxy]-n-propionate
 iso-propyl-2-[pyroglutamoyloxy]-n-caprylate
 n-propyl-2-[pyroglutamoyloxy]-n-propionate
 n-propyl-2-[pyroglutamoyloxy]-n-caprylate
 5 stearyl-2-[pyroglutamoyloxy]-n-propionate
 12-hydroxystearyl-2-[pyroglutamoyloxy]-n-propionate
 stearyl-2-[pyroglutamoyloxy]-n-stearate
 palmityl-2-[pyroglutamoyloxy]-n-propionate
 linoleyl-2-[pyroglutamoyloxy]-n-propionate
 10 linoleyl-2-[pyroglutamoyloxy]-n-caprylate
 lauryl-2-[pyroglutamoyloxy]-n-caprylate
 stearyl-2-[pyroglutamoyloxy]-n-caprylate
 glyceryl mono(2-[pyroglutamoyloxy]-n-propionate)
 glyceryl mono(2-[pyroglutamoyloxy]-n-caprylate), and
 15 glyceryl di(2-[pyroglutamoyloxy]-n-propionate).

It is to be understood that the above lists of specific examples of esters of pyroglutamic acid are not exhaustive, there being many other examples expressed by the generic structure of these esters.

Further examples of penetration enhancers include:-

Dimethyl sulphoxide
 20 N,N-Dimethyl acetamide
 N,N-Dimethyl formamide
 2-Pyrrolidone
 1-Methyl-2-pyrrolidone
 5-Methyl-2-pyrrolidone
 25 1,5-Dimethyl-2-pyrrolidone
 1-Ethyl-2-pyrrolidone
 Phosphine oxides
 Sugar esters
 Tetrahydrofurfural alcohol

30 Urea
 Diethyl-m-toluamide, and
 1-Dodecylazacycloheptan-2-one Further examples of penetration enhancers include surface active agents, preferred examples of which include:

(i) Anionic surface active agents, such as metallic or alkanolamine salts of fatty acids for example sodium
 35 laurate and triethanolamine oleate;
 alkyl benzene sulphonates, for example triethanolamine dodecyl benzene sulphonate;
 alkyl sulphates, for example sodium lauryl sulphate;
 alkyl ether sulphates, for example sodium lauryl ether sulphate [2 to 8 EO];
 sulphosuccinates, for example sodium dioctyl sulphosuccinate;
 40 monoglyceride sulphates, for example sodium glyceryl monostearate monosulphate;
 isethionates, for example sodium isethionate;
 methyl taurides, for example Igepon T;
 acylsarcosinates, for example sodium myristyl sarcosinate;
 acyl peptides, for example Maypons and Lamepons;
 45 acyl lactylates,
 polyalkoxylated ether glycolates, for example trideceth-7 carboxylic acid;
 phosphates, for example sodium dilauryl phosphate.

(ii) Cationic surface active agents, such as amine salts, for example sapamin hydrochloride;
 quaternary ammonium salts, for example Quaternium 5, Quaternium 31 and Quaternium 18;

50 (iii) Amphoteric surface active agents, such as imidazol compounds, for example Miranol;
 N-alkyl amino acids, such as sodium cocaminopropionate and asparagine derivatives;
 betaines, for example cocoamidopropylbetaine

(iv) Nonionic surface active agents, such as fatty acid alkanolamides, for example oleic ethanolamide;
 esters of polyalcohols, for example Span;
 55 polyglycerol esters, for example that esterified with C₁₂₋₁₈ fatty acids and one or several OH groups;
 polyalkoxylated derivatives, for example polyoxy:polyoxyethylene stearate, and octylphenoxy polyethoxyetha-
 nol (TRITON X-100);
 ethers, for example polyoxyethylene lauryl ether;
 ester ethers, for example Tween;
 60 amine oxides, for example coconut and dodecyl dimethyl amine oxides.

Mixtures of two or more of the above surface active agents can be employed in the composition according to the invention.

(c) cationic polymers chosen from:

Guar Hydroxypropyltrimonium chloride

Quaternium-19

Quaternium-23

Quaternium-40

Quaternium-57

Poly(dipropyldiallylammonium chloride)

Poly(methyl- β -propaniodiallylammonium chloride)

Poly(diallylpiperidinium chloride)

Poly(vinyl pyridinium chloride)

Quaternised poly (vinyl alcohol)

Quaternised poly (dimethylaminoethylmethacrylate); and mixtures thereof.

The amount of vehicle in the composition, including water if present, should preferably be sufficient to carry at least a portion of a selected chemical inhibitor factor to the skin in an amount which is sufficient effectively to enhance hair growth. The amount of the vehicle can comprise the balance of the composition, particularly where little or no other ingredients are present in the composition. Accordingly, the vehicle or vehicles can comprise from 1 to 99.9999%, preferably from 50 to 99.5% by weight of the compositions.

The amount of activity enhancer, when employed in accordance with the invention, will normally be from 0.1 to 50%, preferably from 0.5 to 25% and most preferably from 0.5 to 10% by weight of the composition.

(d) Iontophoresis

A further means for enhancing the activity of chemical inhibitor following topical application is the use of iontophoresis. A preferred iontophoretic device for this purpose comprises a pad of absorbent material, such as a nonwoven sheet or sponge, impregnated with a solution of chemical inhibitor as herein defined, the pad carrying an electrode, for example in the form of a metallic sheet, through which an electric current can be passed, in order to enhance delivery of the chemical inhibitor to and through the epidermal layer of the skin.

Further preferred embodiments of the invention

Further preferred embodiments of the invention are those where the composition according to the invention comprises a second hair growth stimulant in addition to at least one lactam, as herein defined.

Particularly preferred mixtures include the following, where minoxidil can be employed in compositions according to the invention with a lactam.

Accordingly, preferred mixtures are:

Minoxidil and D-glucaro-1,5-lactam

Minoxidil and L-galactono-1,5-lactam

Minoxidil and L-idaro-1,5-lactam

Minoxidil and L-arabino-1,5-lactam

Minoxidil and 2,3,5-tri-O-acetyl-D-glucaro-1,5-lactam

Minoxidil and D-glucaro-1,5-lactam ethyl ester

Perfume

The composition according to the invention can also optionally comprise a perfume in an amount sufficient to make the composition acceptable to the consumer and pleasant to use. Usually, the perfume will form from 0.01 to 10% by weight of the composition.

Preservation of the Composition

The composition according to the invention is preferably preserved in such a manner that it will enjoy an extended shelf life following manufacture and prior to sale and use. Ideally the composition will have an indefinite shelf life.

It is accordingly apparent that the chemical inhibitor is likely to be prone to attack by bacteria, moulds and fungi and other microbial influences, particularly at pH values near neutrality that characterise the preferred composition. The shelf-life of the composition can therefore be unacceptably short due to the biodegradation of the inhibitor unless steps are taken to preserve the composition.

In order to be preserved, the composition should preferably be free, or substantially free, from viable microbial contaminants that are capable of resulting in microbial spoilage of the composition, and/or biodegradation of the inhibitor prior to topical application of the composition to mammalian skin or hair. It is to be understood, however, that the invention is also concerned with compositions, as herein defined, which may contain viable but dormant microorganisms, such as bacterial spores, provided that the conditions of preservation do not result in substantial proliferation of the microorganisms prior to use of the composition.

Examples of methods that can be employed to achieve preservation of the composition, includes the following:

(i) Sterilisation

The composition according to the invention can be preserved by sterilisation to remove or kill substantially all viable microbial contaminants. This can be achieved for example by irradiation using a lethal dose of gamma

rays, by heat sterilisation or by ultrafiltration using techniques that are well established in the pharmaceutical industry.

(ii) Extremes of pH value

The composition according to the invention can alternatively be preserved by adjusting its pH to a value that is either too low (e.g. pH < 2) or too high (e.g. pH > 12) to permit significant proliferation of microbial contaminants. The pH of the composition can accordingly be adjusted to desired high or low values by addition of an alkali or acid as a pH adjustant.

(iii) Chemical Preservative

The composition according to the invention can also be preserved by including in it a chemical preservative which functions to prevent the growth of or kill bacteria, fungi or other microorganisms.

Examples of chemical preservatives include ethanol, benzoic acid, sodium benzoate, sorbic acid, potassium sorbate, sodium propionate and the methyl, ethyl, propyl and butyl esters of p-hydroxybenzoic acid. The amount of chemical preservative that can be incorporated in the composition according to the invention will generally be from 0.05 to 5%, preferably from 0.1 to 2% by weight, the amount chosen being sufficient to arrest microbial proliferation.

(iv) Water activity depressants

The composition according to the invention can also be preserved by the inclusion of a water activity depressant such as glycerol, propylene glycol, sorbitol, sugars and salts, for examples alkali metal halides, sulphates and carboxylates. When employing a water activity depressant, sufficient should be incorporated in the composition according to the invention to reduce the water activity (a_w) from 1 to < 0.9, preferably to < 0.85 and most preferably < 0.8, the lowest of these values being that at which yeasts, moulds and fungi will not proliferate.

Other chemical inhibitor adjuncts

The composition according to the invention can also contain adjuncts other than those already mentioned, depending on the form of the intended product. It is, for example, possible to include antiseptics, antioxidants, emulsifiers, colouring agents, detergents and antiinflammatory agents which can improve the stability and consumer appeal of the composition. Examples of antiinflammatory agents include steroidal (eg., hydrocortisone and other corticosteroids) and non-steroidal (eg., ibuprofen and its derivatives) compounds.

The composition according to the invention can also be employed as a vehicle for a wide variety of cosmetically or pharmaceutically active ingredients, particularly ingredients which have some beneficial effect other than the promotion of hair growth when applied to the skin.

Process

The invention also provides a process for the preparation of a composition suitable for topical application to mammalian skin or hair which comprises mixing a chemical inhibitor as herein defined, with a suitable vehicle to provide a composition according to the invention, in which the inhibitor forms from 0.0001 to 99% by weight of the composition.

Product Form and Container

The composition of the invention can be formulated as a liquid, for example as a lotion, shampoo, conditioner or milk or use in conjunction with an applicator such as a roll-ball applicator, or a spray device such as an aerosol can containing propellant, or a container fitted with a pump to dispense the liquid product.

When the composition is contained in a pressurised aerosol container, the propellant in providing an inert headspace within the container will aid in preserving the composition.

The composition of the invention can also be solid or semi-solid, for example a stick, cream or gel, for use in conjunction with a suitable applicator or simply a tube, bottle or lidded jar, or as a liquid-impregnated fabric, such as a tissue wipe.

The invention accordingly also provides a closed container containing the composition as herein defined.

Use of the Chemical Inhibitor for Inducing, Maintaining or Increasing Hair Growth

The invention also provides for the use of a chemical inhibitor, as herein defined, for topical application to mammalian hair or skin particularly the scalp, for inducing, maintaining or increasing terminal hair growth, and/or converting vellus hair to growth as terminal hair.

The composition of the invention is accordingly primarily intended for topical application to the scalp of the human subject, particularly where the head is already bald or balding, in order to reduce or prevent the onset of baldness.

The invention also provides for the use of the inhibitor in the preparation of a therapeutic composition for treating baldness.

The amount of the composition and the frequency of application to the hair and/or scalp can vary widely, depending on personal needs, but it is suggested as an example that topical application of from 0.1 to 5g daily containing from 0.00001 to 1g of a selected chemical inhibitor over the period of at least six months will in most

cases result in an improvement in hair growth.

EVALUATION OF EFFICACY OF CHEMICAL INHIBITORS USING THE RAT MODEL

The Rat Hair Growth Test

The effect of compounds on hair growth was assessed using male albino Wistar rats as an animal model. The rats were chosen from as few litters as possible and were each approximately 42 days of age at the start of the test. Each rat was housed individually to prevent licking.

In each comparison, 10 rats were used in each group and hair growth was assessed as follows:

A small patch of normal skin (4cm x 4cm) on the upper back of each rat was clipped at the start and 0.3 ml of a hair growth stimulant composition (or a control) applied topically twice daily and once on Saturdays and Sundays to each clipped area. The concentration of test compound in the composition was 0.2 mg/ml.

Hair was clipped from the area of the patch twice weekly, collected and weighed at each time point over a standard period of 3 months, and cumulative hair weight calculated. From these data, it was possible to estimate the effect of a hair growth stimulant as a test compound on the amount and duration of hair growth during the experiment. A positive response, i.e. an increase of at least 10% by weight of hair after 3 months treatment, compared with a control indicates the potential of the test compound to prevent hair loss and/or reverse baldness in human subjects.

Accordingly, when the chemical inhibitors, as herein defined, are assessed either individually or in combination as test compounds by the Rat Hair Growth Test, an increase of at least 10% by weight of hair after 3 months treatment will be obtained. Usually, the 10% by weight minimum value will be attained well before the end of this 3 month period.

EXAMPLES

The invention is illustrated by the following examples, in each of which the lactam structure number is given in parenthesis.

Example 1

This Example illustrates a lotion according to the invention which is suitable for topical application to the scalp in order to promote hair growth.

The lotion has the following formulation:

	<u>0/o w/w</u>	
L-Galactono-1,4-lactam (3)	0.1	
ethanol	99.995	
perfume	q.s.	

Example 2

This Example illustrates a hair tonic which is suitable for application to hair or scalp.

The hair tonic has the following formulation:

	<u>0/o w/w</u>	
L-Arabino-1,5-lactam (4)	0.8	
ethanol	50	
water	49	
perfume	q.s.	

Example 3

This Example also illustrates a lotion which is suitable for topical application to the scalp.

The lotion has the following formulation:

% w/w

D-Fucono-1,5-lactam (5)	1.5
propan-2-ol	10
ethanol	88.5
perfume	q.s.

Example 4

This Example also illustrates a hair tonic which is suitable for application to hair or scalp.
The hair tonic has the following formulation:

% w/w

D-Glucaro-1,5-lactam (2)	0.2
ethanol	40
water	59.80
perfume	q.s.

Examples 5 to 8

The following formulations represent lotions which can be used topically in the treatment of bald or balding male or female heads.

% w/w

	<u>5</u>	<u>6</u>	<u>7</u>	<u>8</u>
Hydroxyethyl cellulose	0.4	-	0.4	-
Absolute ethanol	25	25	25	25

Example 13

This Example illustrates a water-in-oil high internal phase emulsion containing a glycosaminoglycanase inhibitor according to the invention.

The emulsion consisted of 10% by volume oily phase and 90% by weight aqueous phase.

The oily phase and the aqueous phase had the following constitution:

	<u>% w/w</u>	
<u>Oily phase</u>		
Sorbitan monooleate	20	45
Quartenium-18 hectorite	5	
Liquid paraffin	75	
		50
<u>Aqueous phase</u>		
D-glucaro-1,5-lactam ethyl ester*	0.5

Preservative	0.3	
Perfume	q.s.	
Sodium chloride (1% w/w solution)	to 100	60

* esterified (2)

The emulsion was prepared by taking 10 parts by volume of the oily phase and to it adding slowly with stirring 90 parts by volume of the aqueous phase.

The high internal phase water-in-oil emulsion so formed can be applied topically to the scalp, to improve hair growth and regrowth.

The following examples 14 to 18 illustrate shampoos for use in washing the hair and scalp, and for promoting hair growth on the scalp.

Example 14

% w/w

15	Sodium lauryl ether sulphate (2 EO) [210% AD]	41.4
20	Lauryl dimethylamino acetic acid betaine: [30% AD]	4
	Coconut fatty acid diethanolamine	1.5
25	Oleyl triethoxy phosphate (BRIPHOS 03D)	1
	Polyglycol-polyamine condensation resin (POLYQUARTH) [50% active]	1.5
30	Preservative, colouring matter, salt	0.58
	D-glucaro-1,5-lactam butyl ester *	5
35	Perfume	q.s.
	Water	to 100
	* esterified (2)	

Example 15

% w/w

45	Sodium lauryl ether sulphate (2 EO) [100% AD]	12
50	POLYMER JR400	2.5
	BRIPHOS 03D	2.5
	D-Glucaro-1,4:6,3-di-lactam (11)	4
55	Magnesium Sulphate	5
	Perfume	q.s.
	Water	to 100

Example 16

	<u>% w/w</u>	
Monoethanolamine	20	
lauryl sulphate : [100% AD]		5
JAGUAR C13S	3	
BRIPHOS 03D	1.7	
Coconut diethanolamide	5	
D-Glucaro-1,4-lactam (6)	1	10
Zinc gluconate	3	
Perfume	q.s.	
Water	to 100	15
pH adjusted to 6.5		

Example 17

	<u>% w/w</u>	
Sodium lauryl ether sulphate (3 EO) : [100% AD]	12	25
JAGUAR C13S	0.3	
BRIPHOS 03D	1	30
L-Idaro-1,5-lactam (12)	2	
Sodium chloride	4	
Perfume	q.s.	
Water	to 100	35
pH adjusted to 6.5		

Example 18

	<u>% w/w</u>	
Sodium lauryl ether sulphate (2 EO) : [100% AD]	12	45
POLYMER JR400	3	
BRIPHOS 03D	1	50
Opacifier	9	
L-Idaro-1,5-lactam propyl ester*	5	
Perfume	q.s.	55
Water	to 100	
pH adjusted to 6.5		
* esterified (12)		60

Examples 19 to 24

The following Examples 19 to 24 illustrate powder compositions according to the invention which can be 65

applied topically to the scalp.

	<u>19</u>	<u>20</u>	<u>21</u>	<u>% w/w</u>	<u>22</u>	<u>23</u>	<u>24</u>
5 Chemically modified starch	5	-	5	-	5	-	-
10 Chemically modified cellulose	-	5	-	5	-	5	-
Boric acid	10	10	10	10	10	10	10
Zinc oxide	5	5	5	5	5	5	5
15 D-Glucaro-1,4-lactam (6)	3	2	5	1	-	-	-
Minoxidil glucuronide	5	10	2	4	3	5	5
20 D-Glucaro-1,4:6,3-dilactam (11)	-	-	-	2	5	3	3
Perfume	q.s.	q.s.	q.s.	q.s.	q.s.	q.s.	q.s.
Chalk	10	10	10	10	10	10	10
25 Talc	to 100	100	100	100	100	100	100

Example 25

30 The following example illustrates a lotion according to the invention which can be applied topically to the scalp to prevent hair loss and stimulate hair regrowth.

	<u>% w/w</u>
35 D-Glucaro-1,5-lactam (2)	7
Minoxidil	0.2
ethanol	16
citric acid	1.05
40 water	to 100
pH adjusted to 4.2 with sodium hydroxide	

Examples 26 & 27

These examples illustrate hair tonics which are suitable for application to the hair and scalp. The hair tonics had the following formulation:

	<u>26</u>	<u>% w/w</u>	<u>27</u>
55 L-Galactaro-1,4-lactam (3)	2	-	-
Trilactam*	-	3	3
ethanol	50	50	50
water	48	47	47
60 perfume	q.s.	q.s.	q.s.
* 2,3,5-Tri-O-acetyl-D-glucaro-1,4-lactam (13)			

Example 28

This example illustrates a microgel which is suitable for topical application to hair or scalp. The gel had the following formulation:

		<u>% w/w</u>	
A.	Poly- oxyethylene (10) oleyl ether	14.5	5
	Poly- oxyethylene fatty glyceride	14.5	10
	Light liquid petroleum	13.7	
	Propylene glycol	7.6	15
	Sorbitol	5.9	
	Dilactam *	4	
B.	Perfume	q.s.	20
C.	Water	to 100	

* 2,5-Di-O-acetyl-D-glucaro-1,4:6,3-dilactam (14)

This microgel was prepared by heating part A to 90°C and part C to 95° and then adding part C to part A with stirring. Part B was then added at 70°C and the final mixture cooled and poured into jars at 55°C to 60°C. On further cooling, a gel was formed.

Examples 29 to 31

These examples illustrate shampoos which are suitable for topical application to hair in order to cleanse it, at the same time delivering chemical inhibitors to the scalp to enhance hair growth or regrowth.

The shampoo had the following formulation:

	<u>29</u>	<u>30</u>	<u>31</u>
5	Triethanol- amine lauryl sulphate	16.8	18.0
	Coconut diethanol- amide	3.0	-
10	Hydroxy- propylme- thylcellu- lose (a)	0.25	0.1
15	Corn syrup (80% solids) (b)	20.5	40.0
	Dimethyl- polysil- oxane (c)	1.0	1.0
20	Volatile silicone (d)	-	-
	Cationic cellulose (e)	0.5	-
25	Ethyl alcohol (SDA 40)	9.0	10.0
30	Vinyl carboxy polymer (f)	0.75	0.3
	D-Glucaro- 1,5-lactam (2)	1	-
35	D-Galac- tono- 1,4-lactam (3)	-	2
40	D-Glucaro- 1,4-lactam (6)	-	-
	Minoxidil	0.5	0.5
	Perfume, colour, preserva- tive	q.s.	q.s.
45	Water	to 100	to 100
50	Acid or base to pH:	6.5	6.5

a - Methocel E4M (Dow Chemical)
 b - 42 Dextrose equivalent (Staley 1300)
 c - 60,000 centistokes (Viscasil, GEC)
 d - Dow Corning 344
 e - Polymer JR 400
 f - Carbopol 941 (BF Goodrich)

Examples 32 to 35

The following formulations represent lotions which can be used topically in the treatment of bald or balding male or female heads.

	<u>32</u>	<u>33</u>	<u>% w/w</u>	<u>34</u>	<u>35</u>	
Hydroxyethyl cellulose	0.4	-		0.4	-	5
Absolute ethanol	25	25		25	25	
Propane-1,2-diol	-	-		38.4	38.4	
Butane-1,3-diol	38.4	38.8		-	-	
Paramethyl benzoate	0.2	0.2		0.2	0.2	10
D-Glucaro-1,5 lactam methyl ether (15)	5	-		-	-	
2-Propionoamido- 2-deoxy glucaro-1,5-lactam (16)	-	1		-	-	15
D-Glucaro-1,5-lac- tam ethyl ester*	-	-		2	-	
D-Glucaro-1,5-lac- tam propyl ester*	-	-		-	4	20
Minoxidil	0.2	0.2		0.2	0.2	
Perfume	1	1		1	1	
Water	to 100	100		100	100	25

* esterified (2)

Example 36

This Example also illustrates a lotion which is suitable for topical application to the scalp:
The lotion has the following formulation:

	<u>% w/w</u>	
D-Glucurono-6,3-lac- tam (7)	1.5	
Diisopropyl sebacate	10	
ethanol	88.5	40
perfume	q.s.	

Example 37

This Example also illustrates a hair tonic which is suitable for application to hair or scalp:
The hair tonic has the following formulation:

	<u>% w/w</u>	
D-Glucurono-6,3-lac- tam (7)	0.2	
Pyroglutamic acid ethyl ester	10	55
ethanol	40	
water	49.80	
perfume	q.s.	60

Claims

1. A lactam having the structure:

where A^1 and A^6 are $-\text{H}$, $-\text{CH}_3$, $-\overset{\text{OT}}{\text{C}}=\text{O}$, $-\text{CH}_2\text{OT}$

or $-\overset{\text{NH}}{\text{C}}=\text{O}$,

A^1 and A^6 being the same or different, and at least one of which being the group:

$-\overset{\text{NH}}{\text{C}}=\text{O}$

in a lactam ring;

and where Q is $-\text{OT}'$, $-\text{NHT}'$ or a lactam linkage to A^1 or A^6 ;

the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

$-\text{H}$, $-\text{C}_p\text{H}_{2p+1}$ or a metal ion,

T' is $-\text{H}$ or $-\text{COC}_p\text{H}_{2p+1}$, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

$-\text{OT}'$ or $-\text{NHCOT}'$,

then that group or groups can be of either stereochemical configuration with respect to the plane of the ring.

provided also that where the lactam has the structure:

(1a)

and when A⁶ is
$$\begin{array}{c}
 \text{O} \\
 | \\
 \text{C} = \text{O}
 \end{array}$$
and T is $-\text{C}_p\text{H}_{2p+1}$, then p is an integer of from 5 to 22.

2. A lactam in accordance with claim 1, chosen from:

L-Galactono-1,4-lactam,

L-Arabeto-1,5-lactam,

D-Fucono-1,5-lactam,

D-Glucaro-1,4-lactam,

D-Glucurono-6,3-lactam,

1,2,5-Tri-O-acetyl-D-glucurono-6,3-lactam,

2-Acetamido-2-deoxyglucono-1,5-lactam,

2-Acetamido-2-deoxygalactono-1,5-lactam,

D-Glucaro-1,4:6,3-dilactam,

L-lidaro-1,5-lactam, and

mixtures thereof.

3. A lactam in accordance with claim 1, chosen from:

2,3,5-Tri-O-acetyl-D-glucaro-1,4-lactam,

2,5-Di-O-acetyl-D-Glucaro-1,4:6,3-dilactam,

D-Glucaro-1,5-lactam methyl ester,

2-Propionamide-2-deoxyglucaro-1,5-lactam, and

mixtures thereof.

4. A process for the synthesis of a lactam according to claim 1, 2 or 3, which comprises the step of treating an esterified deoxyamino uronic acid with a base to yield the corresponding lactam.

5. A process for the synthesis of a lactam according to claim 1, 2 or 3, which comprises the step of catalytically reducing the corresponding 5-azido lactone.

6. A composition suitable for topical application to mammalian skin or hair for inducing, maintaining or increasing hair growth which comprises:

(I) a chemical inhibitor of glycosidase activity chosen from lactams having the structure:

where A¹ and A⁶ are -H, -CH₃,

or -C=O

A¹ and A⁶ being the same or different, and at least one of which being the group:

in a lactam ring;

and where Q is -OT', -NHT' or a lactam linkage to A¹ or A⁶;

the Q groups being the same or different, and at least one of which is involved in a lactam linkage;

and where T is the same or different and is chosen from

-H, -C_pH_{2p+1} or a metal ion,

T' is -H or -COC_pH_{2p+1}, and

p is an integer of from 1 to 22;

provided that:

where any of the Q groups is

-OT' or -NHT',

then that group or groups can be of either stereochemical configuration with respect to the plane of the ring; and

(ii) a cosmetically acceptable vehicle for the chemical inhibitor.

7. A composition according to claim 6, in which the total amount of chemical inhibitor present in the composition is sufficient to increase hair growth in the rat, in accordance with the Rat Hair Growth Test, by at least 10% more than that obtainable using a control composition from which the said inhibitor has been omitted; the Rat Hair Growth Test comprising the steps of:

(i) selecting albino Wistar rats each approximately 42 days of age;

(ii) clipping the hair from a patch of normal skin (4cm x 4cm) on the upper back of each rat;

(iii) applying to each said clipped patch 0.3 ml of a composition containing 0.2 mg/ml of a hair growth stimulant (or a control), said application taking place twice daily and once on Saturdays and Sundays;

and

(iv) clipping hair from each patch twice weekly over a period of 3 months, said hair clippings being collected and weighed,

the effect on hair growth of a hair growth stimulant as a test compound being assessed as a positive response when the increase in hair growth, as measured by the accumulated weight of hair clippings over the 3 month period is at least 10% greater than that resulting from topical application of a control composition under the same conditions during the same time period.

8. A composition according to claim 6 or 7, in which the lactam is chosen from:

L-Galactono-1,4-lactam,

L-Arabino-1,5-lactam,

D-Fucono-1,5-lactam,

D-Glucaro-1,4-lactam

D-Glucurono-6,3-lactam,

1,2,5-Tri-O-acetyl-D-glucurono-6,3-lactam,

2-Acetamido-2-deoxyglucono-1,5-lactam,

2-Acetamido-2-deoxygalactono-1,5-lactam,

D-Glucaro-1,4:6,3-dilactam,
L-Idaro-1,5-lactam, and
mixtures thereof.

9. A composition according to claim 6 or 7, in which the lactam is chosen from:

2,3,5-Tri-O-acetyl-D-glucaro-1,4-lactam,
2,5-Di-O-acetyl-D-Glucaro-1,4:6,3-dilactam,
D-Glucaro-1,5-lactam methyl ester,

2-Propionoamide-2-deoxyglucaro-1,5-lactam, and
mixture thereof.

10. A composition according to any of claims 6 to 9, in which the total amount of chemical inhibitor present in the composition is sufficient to increase hair growth in the rat by at least 20% more than that obtainable using a control composition from which the chemical inhibitor has been omitted, in accordance with the Rat Hair Growth Test.

11. A composition according to any of claim 6 to 10, in which the chemical inhibitor forms from 0.0001 to 99% by weight of the composition.

12. A composition according to claim 11, in which the chemical inhibitor forms from 0.1 to 20% by weight of the composition.

13. A composition according to any of claims 6 to 12, which additionally comprises a means for enhancing the activity of said chemical inhibitor following topical application to the skin.

14. A composition according to claim 13, in which the means for enhancing the activity of said growth factor is another hair growth stimulant.

15. A composition according to claim 14, in which the hair growth stimulant is chosen from:

(i) α -1,4 esterified disaccharides having the structure (50);

(ii) esterified oligosaccharides including at least one esterified disaccharide unit consisting of uronic acid residue having the structure (51) and a hexosamine residue having the structure (52);

(iii) minoxidil and its derivatives;

(iv) minoxidil glucuronide;

(v) minoxidil sulphates;

(vi) direct proteoglycanase inhibitors;

(vii) glycosaminoglycanase inhibitors;

(viii) glycosaminoglycan chain cellular uptake inhibitors;

(ix) chemical activators of protein kinase C; and

(x) mixtures thereof.

16. A composition according to claim 15, in which the hair growth stimulant is minoxidil.

17. A composition according to claim 15, in which the glycosaminoglycanase inhibitor is an aldonolactone or an esterified aldonolactone having the structure (53).

18. A composition according to claim 15, in which the glycosaminoglycanase inhibitor is a monosaccharide or esterified monosaccharide having the structure (54).

19. A composition according to claim 15, in which the chemical activator of protein kinase C is a diacylglycerol having the structure (56).

20. A composition according to claim 13, in which the means for enhancing the activity of said growth factor is a penetration enhancer.

21. A composition according to claim 20, in which the penetration enhancer is chosen from:

1-dodecylazacycloheptan-2-one

dibutyl sebacate

2-hydroxyoctanoic acid

esters of pyroglutamic acid having the structure (10)

and mixture thereof

22. A composition according to claim 20, in which the penetration enhancer is chosen from surface active agents.

23. A composition according to claim 13, in which the means for enhancing the activity of said growth factor is a cationic polymer.

24. A composition according to claim 13, in which the means for enhancing the activity of said growth factor is an iontophoretic device.

25. A method of converting vellus hair to growth as terminal hair which comprises the step of applying to the scalp in the region of vellus hair an effective amount of the composition according to any of claims 6 to 24.

26. A method for increasing the rate of terminal hair growth which comprises the step of applying to the scalp in the region of terminal hair an effective amount of the composition according to any of claims 6 to 24.

27. The use of a composition according to any of claims 6 to 24 in the treatment of baldness.

28. The use of a lactam as defined in claim 6, in the preparation of a therapeutic composition for treating baldness.
